

Ideation Phase

Brainstorm & Idea Prioritization

Date	31 January 2025
Team ID	SWTID-2026-9203
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Selected problem: How can employee data from an external spreadsheet be imported into ServiceNow efficiently, accurately and with minimal manual effort?

Step-2: Brainstorm, Idea Listing and Grouping

Ideas generated and grouped around data loading, mapping, validation and verification:

Idea / Approach	Group
Use Import Sets as a staging area before updating the target table	Data Loading
Create a Transform Map to map spreadsheet source fields to target fields	Field Mapping
Use coalesce or an appropriate unique field to reduce duplicate records	Data Integrity
Validate mandatory fields and data formats before/after transformation	Validation
Run the transformation and review the transformation results	Verification

Step-3: Idea Prioritization

The template prioritizes ideas using importance and feasibility. The following matrix applies that approach to the generated ideas.

Idea	Importance	Feasibility	Priority Rationale
Import Set staging	High	High	Essential staging step and straightforward to implement
Transform Map field mapping	High	High	Core mechanism for moving source data to target fields
Validation	High	Medium	Important for preventing inaccurate or incomplete records
Transformation result verification	High	High	Confirms that the import produced the expected target records

Duplicate prevention / unique matching	Medium	Medium	Improves data integrity when existing records are present
---	--------	--------	--

Selected Solution Concept:

Use the ServiceNow Import Set and Transform Map workflow to load the spreadsheet into a staging table, map source fields to the appropriate target fields, execute the transformation, and verify the resulting employee records.
