

Ideation Phase

Empathize & Discover

Date	31 January 2025
Team ID	SWTID-2026-9203
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Empathy Map Canvas:

The empathy map captures the behaviours, attitudes, goals and challenges of the people involved in receiving and importing employee spreadsheet data into ServiceNow. It focuses on their perspective while using the Import Set and Transform Map process.

SAY & DO • Checks spreadsheet columns before upload • Loads the spreadsheet into ServiceNow • Configures source-to-target mappings • Runs the transformation and verifies records	THINK & FEEL • Wants the import process to be simple • Concerned about data accuracy and field mapping • Wants confidence that all spreadsheet records are transformed correctly • Wants to avoid duplicate or incomplete records	SEE • Excel spreadsheets containing employee details • Import Set staging tables • Transform Map field mappings • Transformation results and target records
PAIN • Manual data entry is time-consuming • Incorrect mappings can place data in wrong fields • Missing or invalid values may require rework • Difficult to verify large batches manually	GAIN • Faster bulk employee-data migration • Consistent field mapping • Reduced manual entry and errors • Easy verification of transformed records • Reusable Import Set and Transform Map process	KEY GOAL • Import structured employee data efficiently and accurately • Preserve data integrity from spreadsheet to target table

User Perspective Summary: The primary user needs a dependable way to move structured employee data from Excel into ServiceNow without entering every record manually. The user values accuracy, traceability, simple field mapping and clear transformation results.

Import Data using Transform Maps (Spreadsheet)

Empathy Map Canvas: The empathy map captures the behaviours, attitudes, goals and challenges of the people involved in receiving and importing employee spreadsheet data into ServiceNow. It focuses on their perspective while using the Import Set and Transform Map process.
