

Project Design Phase-II

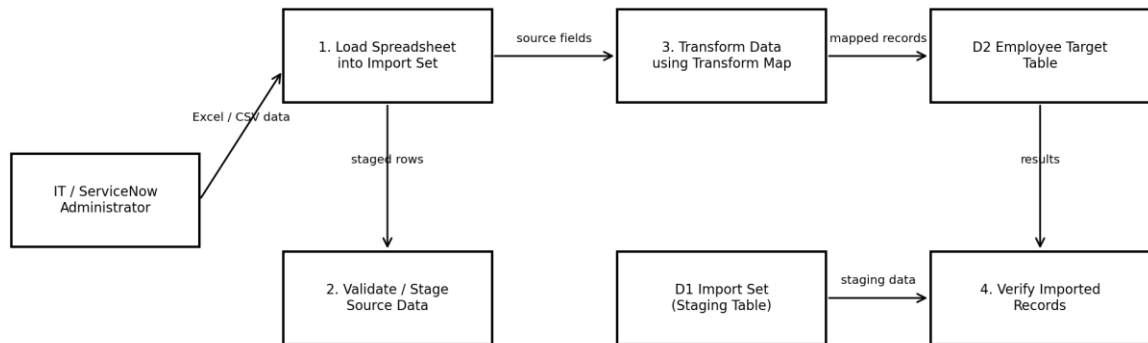

Data Flow Diagram & User Stories

Date	01 October 2026
Team ID	SWTID-2026-9203
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) shows how spreadsheet data enters ServiceNow, how it is staged and transformed, and where the resulting employee records are stored. This follows the supplied template's emphasis on data entering/leaving the system, transformation and storage.

DFD Level 0 - Spreadsheet Import using Import Sets & Transform Maps

External Entity → Process → Data Store → Transformation → Target Records → Verification

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
ServiceNow Administrator	Spreadsheet Data Loading	USN-1	As a ServiceNow administrator, I can load an employee spreadsheet into an Import Set table.	The spreadsheet rows are loaded into the staging table and can be reviewed.	High	Sprint-1
ServiceNow Administrator	Source Data Review	USN-2	As a ServiceNow administrator, I can review the staged employee data before transformation.	Source rows and fields are visible for validation.	High	Sprint-1

ServiceNow Administrator	Transform Map Configuration	USN-3	As a ServiceNow administrator, I can create a Transform Map and map source fields to target fields.	Each required source field is mapped to the appropriate target field.	High	Sprint-1
ServiceNow Administrator	Data Transformation	USN-4	As a ServiceNow administrator, I can run the Transform Map to transform employee data into the target table.	Transformation completes and records are created or updated as configured.	High	Sprint-1
ServiceNow Administrator	Transformation Verification	USN-5	As a ServiceNow administrator, I can review transformation results and identify failed or unmatched rows.	Transformation status/results are available for review.	High	Sprint-1
ServiceNow Administrator	Target Record Validation	USN-6	As a ServiceNow administrator, I can verify the imported employee records in the target table.	Target records contain the expected mapped values.	High	Sprint-1
ServiceNow Administrator	Data Integrity	USN-7	As a ServiceNow administrator, I can detect incomplete or incorrect source data before relying on the imported records.	Invalid or incomplete records are identified during review/verification.	Medium	Sprint-2
ServiceNow Administrator	Repeatable Import	USN-8	As a ServiceNow administrator, I can reuse the defined Import Set and Transform Map process for future spreadsheets with the same structure.	A similarly structured spreadsheet can be loaded and transformed using the documented mapping.	Medium	Sprint-2
