

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	01 October 2026
Team ID	SWTID-2026-9203
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Spreadsheet Data Loading	Load structured employee spreadsheet data into a ServiceNow Import Set table.
FR-2	Source Data Staging & Review	Store imported rows in the Import Set staging area and review source data before transformation.
FR-3	Transform Map Configuration	Create a Transform Map and map source spreadsheet fields to appropriate target table fields.
FR-4	Data Transformation	Execute the Transform Map to create or update employee records in the target table.
FR-5	Result Verification	Review transformation results and validate that target records contain the expected data.
FR-6	Data Integrity	Handle invalid or unmatched data through validation and transformation-result review.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The import workflow should be simple enough for beginners to load data, configure mappings and verify results.
NFR-2	Security	Only authorized ServiceNow users should perform data loading, transformation configuration and record access.
NFR-3	Reliability	The workflow should preserve source-to-target mapping consistently and provide transformation results for review.
NFR-4	Performance	Bulk spreadsheet records should be processed through Import Sets and Transform Maps without unnecessary manual entry.
NFR-5	Availability	The import capability should be

		available whenever the ServiceNow instance is available to authorized users.
NFR-6	Scalability	The workflow should support increasing spreadsheet row counts by using ServiceNow's bulk import and transformation mechanisms.
