

Project Design Phase

Problem – Solution Fit Template

Date	01 October 2026
Team ID	SWTID-2026-9203
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	2 Marks

Problem-Solution Fit:

The Problem-Solution Fit simply means that you have found a problem with the **administrator importing employee spreadsheet data** and that the **Import Set and Transform Map solution** you have realized for it actually solves the administrator's problem. It helps identify behavioral patterns and recognize what would work and why.

Purpose:

- ☐ **Solve complex employee-data import problems** in a way that fits the needs of administrators.
- ☐ **Succeed faster and increase solution adoption** by using the existing Import Set and Transform Map process for spreadsheet-based employee data.
- ☐ **Sharpen communication and implementation strategy** with the right field-mapping, validation, and verification approach.
- ☐ **Increase touch-points with the import process** by finding the right problem-behavior fit and building trust by solving frequent data-import issues, such as incorrect mappings, missing values, and duplicate or incomplete records.
- ☐ **Understand the existing spreadsheet-to-ServiceNow import situation** in order to improve it for the administrators handling employee data.

Define CS - Infinite CS	1. CUSTOMER SEGMENT(S) CS Who is your customer? Administrators / HR team members who need to import employee data from spreadsheets into ServiceNow.	6. CUSTOMER CONSTRAINTS CC What constraints prevent your customers from taking action or limit their choices? Limited time, manual effort, data format issues, incorrect mappings, missing/invalid values, and risk of duplicate or incomplete records.	5. AVAILABLE SOLUTIONS AS Which solutions are available to the customers when they face the problem or need to get the job done? Use the Import Set to load the spreadsheet and the Transform Map to map, transform and validate the data into the target employee table.	Explore AS - alternatives
	2. JOBS-TO-BE-DONE / PROBLEMS J&P Which jobs-to-be-done (or problems) do you address for your customers? There could be more than one, explore different jobs. • Import employee data from spreadsheet. • Ensure data is accurate and complete. • Avoid manual entry and reduce errors.	9. PROBLEM ROOT CAUSE RC What is the real reason that this problem exists? Why is it a problem for your customers? Manual data entry is time-consuming, mappings can be incorrect, data may be missing/invalid, and it is difficult to verify large batches.	7. BEHAVIOUR BE What does your customer do to address the problem and get the job done? Administrators manually check data, prepare the file, load it, configure mappings, run transformation and verify records. They also reprocess when errors occur.	
Identify & Define	3. TRIGGERS TR What triggers customers to act? i.e. seeing their neighbour installing, social proof, reading about it, etc. Triggers include: • Need for bulk data migration. • New employee onboarding or updates. • Alerts about data inconsistencies or errors.	10. YOUR SOLUTION SL What is your solution to the problem? The Import Set and Transform Map solution helps administrators load spreadsheets, map fields, transform and validate data, ensuring accurate and complete employee records in ServiceNow.	8. CHANNELS OF BEHAVIOUR CH Which kind of actions do customers take online? Extract online channels from #7. • ServiceNow platform (Import Set, Transform Map). • Documentation and training resources. • Internal communication (email, chat, team meetings).	Extend online & offline
	4. EMOTIONS: BEFORE / AFTER EM How do customers feel when they face a problem or a job and afterwards? Before: stressed, frustrated, overwhelmed, uncertain. After: relieved, confident, satisfied, productive.		2.0 OUTLINE What kind of actions do customers take offline? Extract offline channels from #7. • Prepare spreadsheet and follow standard format. • Work with HR / data owners for field mapping. • Reprocess failed records if needed.	

Project Fit Summary: The customer is a ServiceNow administrator who needs to migrate structured employee data from an external spreadsheet. The main problem is repetitive manual entry and the risk of incorrect field placement. The proposed Import Set and Transform Map workflow addresses the problem by staging source data, mapping fields, transforming records and enabling verification.
