

Project Development Phase

User Acceptance Testing (UAT)

Date	01 October 2026
Team ID	SWTID-2026-9203
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	

Project Overview

Project Name	Import Data using Transform Maps (Spreadsheet)
Project Description	Import structured employee data from an external spreadsheet into ServiceNow using Import Sets and Transform Maps. The spreadsheet is loaded into a staging Import Set table, source fields are mapped to the target table, transformation is executed, and the resulting records are validated.
Project Version	1.0
Testing Period	01 October 2026 to 01 October 2026
Testing Scope	Spreadsheet upload, Import Set staging, source-data review, Transform Map creation/configuration, field mapping, transformation execution, result review, target-record verification and data-integrity validation.

Testing Environment

URL / Location	ServiceNow personal/developer instance used for the micro project
Credentials	Use authorized project credentials only; do not include passwords in the documentation.

User Stories / Requirements Covered

- USN-1/2 – Prepare and review the employee spreadsheet.
- USN-3/4/5 – Create/load and verify the Import Set staging data.
- USN-6/7 – Create the Transform Map and configure source-to-target mappings.
- USN-8 – Configure appropriate matching logic where required.
- USN-9/10 – Execute transformation and review results.
- USN-11 – Verify target employee records against the source spreadsheet.

Test Cases

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail	Evidence / Notes
TC-001	Valid spreadsheet upload	1. Open Import Set loader. 2. Select valid employee spreadsheet. 3. Submit/load data.	Spreadsheet is accepted and rows appear in the Import Set staging table.	To be recorded	To be marked	Attach screenshot
TC-002	Staging data review	1. Open Import Set table.	Source rows and field values are	To be recorded	To be marked	Attach screenshot

		2. Review imported rows. 3. Compare key fields with spreadsheet.	visible and correctly staged.			
TC-003	Transform Map creation	1. Create Transform Map. 2. Select source Import Set table. 3. Select target employee table.	Transform Map is created with correct source and target tables.	To be recorded	To be marked	Attach screenshot
TC-004	Field mapping	1. Open Field Maps. 2. Map source fields to target fields. 3. Save mappings.	Required source fields map to the intended target fields.	To be recorded	To be marked	Attach mapping screenshot
TC-005	Transformation execution	1. Run Transform. 2. Wait for completion. 3. Open transformation results.	Records are created/updated according to the configured mapping and matching logic.	To be recorded	To be marked	Attach result screenshot
TC-006	Transformation failure handling	1. Use a test row with missing/invalid data. 2. Run transformation. 3. Review result details.	Failed/skipped row is identifiable and does not silently create incorrect data.	To be recorded	To be marked	Record error/result
TC-007	Target record verification	1. Open target employee records. 2. Find imported employee. 3. Compare key fields with source spreadsheet.	Imported record exists and mapped values match the source data.	To be recorded	To be marked	Attach target screenshot
TC-008	Duplicate/matching validation	1. Repeat import using an existing employee identifier. 2. Run transformation. 3. Review result.	Configured matching logic prevents unintended duplicate creation or behaves according to the project rule.	To be recorded	To be marked	Record outcome
TC-009	Batch integrity check	1. Count source rows. 2. Count transformed target records. 3. Compare failures/skips.	Record counts and exceptions are explainable and data integrity is maintained.	To be recorded	To be marked	Record counts
TC-010	End-to-end acceptance	1. Prepare spreadsheet. 2. Load Import Set. 3. Transform. 4. Verify target records.	Complete workflow operates as intended from spreadsheet to verified ServiceNow records.	To be recorded	To be marked	Final demonstration screenshot

Bug Tracking

Bug ID	Bug Description	Steps to Reproduce	Severity	Status	Additional Feedback
BG-001	No confirmed bug at document preparation time.	If encountered, record exact steps and input data.	Low/Medium/High	Open/In Progress/Closed	To be updated during UAT
BG-002	Reserved for additional import/transform issue.	To be completed if required.	Low/Medium/High	Open/In Progress/Closed	To be updated during UAT

Sign-off

Tester Name	
Date of Test Completion	
Signature	

UAT Acceptance Criteria

- All critical positive test cases pass.
- At least one negative/invalid-data scenario is tested.
- Imported target records match the intended source values.
- Transformation results are reviewed and exceptions are documented.
- Any defects found during UAT have a severity, status and reproduction path.
- Tester and project owner sign off before deployment/use.

The supplied UAT template explicitly asks for positive and negative scenarios, detailed feedback, bug severity/status/reproduction steps and sign-off before deployment.
