

PROJECT REPORT

Import Data using Transform Maps (Spreadsheet)

Project Title	Import Data using Transform Maps (Spreadsheet)
Team ID	SWTID-2026-9203
Team Members	Yogesh P Tarun R Ranjith R THILAKKUMAR J Selva Maruthi P
Date	01 October 2026

1. INTRODUCTION

1.1 Project Overview

Import Data using Transform Maps (Spreadsheet) demonstrates how structured employee information received in an external Excel spreadsheet can be migrated into ServiceNow using Import Sets and Transform Maps. The spreadsheet is first loaded into an Import Set table as a staging area. A Transform Map then maps source fields to the appropriate targettable fields. After transformation, the target records are reviewed to validate data integrity.

1.2 Purpose

The purpose is to provide a simple, repeatable and controlled process for bulk employee data migration, reducing repetitive manual entry while making source-to-target mapping, transformation and verification explicit.

Objectives

- Import employee data from Excel.
- Use an Import Set table as the staging layer.
- Configure source-to-target field mappings.
- Execute the Transform Map.
- Validate transformed records against the source.
- Document an end-to-end ServiceNow import workflow.

2. IDEATION PHASE

2.1 Problem Statement

ServiceNow administrators may receive employee information in spreadsheet form that needs to be entered into the platform. Entering each employee manually is repetitive, time

consuming and susceptible to data-entry or field-mapping mistakes. A controlled bulk import workflow is therefore required.

Customer viewpoint: “As a ServiceNow administrator, I need to migrate employee data from a spreadsheet into ServiceNow accurately and efficiently, so that I can avoid repetitive manual entry and maintain reliable employee records.”

2.2 Empathy Map Canvas

Area	Project-specific Finding
Says	I receive employee data in Excel and need to import it into ServiceNow.
Thinks	The fields must map correctly and every row should be accounted for.
Does	Prepares spreadsheet → loads Import Set → reviews staging → maps fields → transforms → validates.
Feels	Before: manual effort and uncertainty. After: controlled and verifiable workflow.
Needs	Reliable bulk import, correct mappings, visible results and easy verification.

2.3 Brainstorming

Idea	Benefit	Decision
Manual record entry	Simple for very small batches but repetitive for bulk data.	Not selected
Direct spreadsheet-to-target entry	Fewer stages but less controlled staging/mapping.	Not selected
Import Set + Transform Map	Provides staging, explicit mapping, transformation and verification.	Selected
Scheduled automated import	Useful for recurring feeds but outside core micro-project scope.	Future enhancement

3. REQUIREMENT ANALYSIS

3.1 Customer Journey Map

Stage	Customer Action	Pain Point	ServiceNow Interaction	Desired Outcome
Receive	Receives Excel file	Data may need checking	External spreadsheet	Usable source
Prepare	Checks columns/values	Missing/inconsistent values	Pre-import review	Clean source
Load	Uploads file	Needs staging confirmation	Import Set Loader	Rows in staging
Map	Maps fields	Incorrect mapping risk	Transform Map	Correct mappings
Transform	Runs transform	Failures/duplicates	Transform execution	Target records
Verify	Checks results	Needs confidence	Results + target table	Validated records

3.2 Solution Requirement

Functional Requirements

FR No.	Functional Requirement	Description
FR-01	Source Preparation	Support structured employee spreadsheet data with required fields.
FR-02	Import Set Loading	Load spreadsheet rows into the staging table.
FR-03	Staging Verification	Review loaded rows before transformation.
FR-04	Transform Map	Create a source-to-target Transform Map.

FR-05	Field Mapping	Map required source fields to target fields.
FR-06	Transformation	Execute the configured transformation.
FR-07	Result Review	Review successful, failed and skipped rows.
FR-08	Target Verification	Compare target records with source data.

Non-Functional Requirements

NFR No.	Requirement	Description
NFR-01	Usability	Workflow should be simple and repeatable for administrators.
NFR-02	Security	Only authorized users should perform import/configuration operations.
NFR-03	Reliability	Results and exceptions should be visible; no silent data loss.
NFR-04	Performance	Planned test batches should process within reasonable time.
NFR-05	Data Integrity	Mapped target values should remain consistent with source values.
NFR-06	Scalability	Workflow should be reusable for larger structured datasets.

3.3 Data Flow Diagram

Data Flow Diagram - Spreadsheet Import using Transform Maps

Figure 1: Data flow from spreadsheet source to verified ServiceNow records.

3.4 Technology Stack

Component	Technology / Platform	Purpose
Data Source	Microsoft Excel (.xlsx)	External structured employee-data source
Import Mechanism	ServiceNow Import Sets	Loads source rows into staging
Transformation	ServiceNow Transform Maps	Maps and transforms source data
Target Data	ServiceNow target employee table	Stores transformed records

Validation	ServiceNow transform results + list/filter views	Checks success and exceptions
Access Control	ServiceNow roles/permissions	Restricts operations

4. PROJECT DESIGN

4.1 Problem Solution Fit

Customer segment: ServiceNow administrators and IT operations staff responsible for employee-data migration. Core problem: employee data arrives externally and must be entered accurately without excessive manual effort. Solution fit: Import Sets provide controlled staging and Transform Maps provide explicit source-to-target mapping and transformation.

4.2 Proposed Solution

Parameter	Project-specific Description
Problem Statement	Manual bulk employee-data entry is repetitive and can introduce errors.
Idea / Solution	Load Excel into Import Set staging, configure Transform Map, transform into target table and verify.
Novelty / Uniqueness	A structured beginner-friendly workflow separating staging, mapping, transformation and validation.
Social Impact / Customer Satisfaction	Reduces repetitive administrative effort and improves confidence in imported records.
Business Model	Internal productivity/process improvement; can also be delivered as ServiceNow implementation/consulting work.
Scalability	Reusable for larger batches and similar structured-data migration scenarios.

4.3 Solution Architecture

Technical Architecture - ServiceNow Import Workflow

Figure 2: Technical architecture of the ServiceNow spreadsheet-import workflow.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

Sprint	Epic	User Stories	Points	Duration	Deliverable
Sprint-1	Source Preparation & Import Set	USN-1 to USN-6	14	6 Days	Prepare source, load staging, verify and create Transform Map
Sprint-2	Mapping, Transformation & Verification	USN-7 to USN-12	14	6 Days	Map, transform, validate, verify and document

Total planned story points: 28. Planned velocity: 14 story points per sprint.

6. FUNCTIONAL AND PERFORMANCE TESTING

6.1 Performance Testing

Test ID	Scenario	Expected Observation	Result
PT-001	10-row batch	Rows load and transform without unexpected errors.	To be recorded
PT-002	50-row batch	Batch completes without abnormal volume-related failure.	To be recorded
PT-003	Invalid/missing value	Problem row is identifiable through results.	To be recorded
PT-004	Post-transform comparison	Target values match source values for mapped fields.	To be recorded

7. RESULTS

7.1 Output Screenshots

Insert actual screenshots from the completed ServiceNow instance; these placeholders are not execution claims.

1. Excel employee spreadsheet
2. Import Set Loader
3. Import Set staging table
4. Transform Map configuration
5. Field Maps
6. Transform result summary
7. Target employee records
8. Source-versus-target validation

Expected result: employee records are created/updated according to the configured mappings and transformation results identify successful and unsuccessful rows.

8. ADVANTAGES & DISADVANTAGES

Advantages	Disadvantages / Limitations
Reduces repetitive manual entry.	Depends on source spreadsheet quality.
Supports bulk migration.	Incorrect mappings can produce incorrect target values.
Provides a staging layer.	Initial configuration requires administrator effort.
Provides transformation results for verification.	Large/recurring imports may require further optimization.
Reusable for similar structured imports.	Core project is spreadsheet-based, not real-time integration.

9. CONCLUSION

The project demonstrates a controlled ServiceNow data-import workflow in which employee data moves from an external spreadsheet through Import Set staging and Transform Map processing into the target employee table. The final verification step provides a practical method for confirming data integrity and gives beginners a clear understanding of bulk-data migration in ServiceNow.

10. FUTURE SCOPE

- Scheduled recurring imports.
- Advanced duplicate detection and reconciliation.
- Transform scripts for complex conversions.
- REST/SOAP integration with HR systems.
- Automated notifications for failed imports.
- Import monitoring dashboard and historical metrics.
- Reusable mapping templates.

11. APPENDIX

A. Example Source Data Structure

Field	Format	Purpose
Employee ID	Unique identifier	Identifies employee
Employee Name	Text	Employee name
Department / Branch	Text	Organizational unit
Email	Email/text	Employee contact
Phone	Text	Employee contact number

B. Source Code

The core project is a ServiceNow configuration exercise. Conventional application source code is not required. Any Transform Map scripts added during implementation should be inserted here.

C. Dataset Link
